# Community Benefits *Tracker* Hospital Events Module Highlights:

Community Benefits *Tracker* Hospital Events Module is a hosted, Web-based data collection and reporting system that has been developed to streamline the collection of your hospitals' community benefit activities. It is designed to help users gather community benefit event information quickly and easily.

- ★ **Follows CHA/VHA guidelines and the AHA community benefit resolution** — The program is designed to align with state association's annual survey requirements.
- ★ **Tracks the individual hospital's community benefit events on an ongoing basis** — No need for end-of-the-year rush to gather all the data for annual survey requirements, your event activities totals are current and based on "real-time" data.
- ★ **Tracks and rolls-up data from multiple hospitals (and other entities) within a system** — Tracker offers the ability to set up clinic-facility-system relationships and roll-up data so you control the information or view. This feature also allows for reporting based on an individual hospital or entity or a combination of both ... you get to choose!
- ★ **"Copy-event" feature saves you time** — The copy-event features allows you to duplicate the content of an event, and yet gives you the flexibility to change the date, attendees, etc. without having to re-enter all static information.
- ★ **Gives hospitals the ability to easily communicate with hospital staff through the homepage** — A homepage content editor makes it easy to dynamically communicate with staff through links and announcements. Your message includes text and graphics, and you control message timing with start/end dates.
- ★ **Populates the annual survey module with data from Events Module automatically** — If your Hospital Association uses the Tracker tool to collect annual survey data, your data from the Events module will automatically populate the annual survey, so no need to duplicate efforts or cause redundant data entry.
- ★ **You have control of user set-up and user rights** — Tracker provides you with the flexibility to have control of user set-up and user rights for your system, facilities and clinics. You determine who has access to what area of the software.
- ★ **Removes worries about installing or maintaining desktop software** — *Tracker* is web-based and hosted by MHA, so no need for your IT department to install updates etc. Minimizes any additional investment from your facility for hardware or software...all that is needed is internet access and a browser.
- ★ **Allows salary and fringe benefit rates data to be hidden from users' view** — You are in control of the views available to your staff. Important financial information on salary rates and fringe benefits costs can be "hidden" from the users view.
- ★ **Create event templates for Community Needs Information** — The Community Needs Information section is for gathering, planning and tracking information. Templates can be saved for use on another event ... removes duplication of data entry.
- ★ **Captures data for other activities or quantities, outside the community benefits arena** — Gather information to use in your hospital's annual report; i.e. employee volunteer hours and hospital volunteer hours.
- ★ **Provides robust reporting** — The flexible reporting module provides you access to your data in real time. Reports can be generated in MS Excel or Adobe pdf formats.
- ★ **Capture your community benefit stories** — The easy-to-use story editor gives you the flexibility to save both text and graphics for future use.
