• Centers for Medicare & Medicaid Services (CMS) Recovery Audit Contractors (RACs) conduct *automated reviews* of Medicare payments to health care providers—using computer software to detect improper payments. RACs also conduct *complex reviews* of provider payments—using human review of medical records and other medical documentation to identify improper payments to providers.

• Improper payments include:
  – incorrect payment amounts;
  – incorrectly coded services (including Medicare Severity diagnosis-related group (MS-DRG) miscoding);
  – non-covered services (including services that are not reasonable and necessary); and
  – duplicate services.

• Automated activity includes the traditional automated activity as described above as well as semi-automated review activity. These claims are denied in an automated manner if supporting documentation is not received on a timely basis.
RAC TRAC Background

- AHA created RAC TRAC—a free, web-based survey—in response to a lack of data provided by CMS on the impact of the RAC program on America's hospitals.
  - Hospitals use AHA’s online survey application, RAC TRAC (accessed at www.aharactrac.com), to submit their data regarding the impact of the RAC program.
  - Survey questions are designed to collect cumulative RAC experience data, from the inception of a hospital’s RAC activity through the 2nd quarter of 2013.
  - Survey registration information and RAC TRAC support can be accessed at ractracsupport@providercs.com or 1-888-722-8712.
Executive Summary

- 2,425 hospitals have participated in RACTRAC since data collection began in January of 2010. 1,273 hospitals participated this quarter.

- Participants continue to report dramatic increases in RAC activity:
  - Medical record requests have increased by 47% since Q4 2012.
  - The number of complex audit denials reported by respondents has increased by 58% since Q4 2012.

- 60% of medical records reviewed by RACs did not contain an overpayment, according to the RAC.

- 67% of hospitals indicated medical necessity denials were the most costly complex denials.

- 62% of short-stay denials for medical necessity were because the care was provided in the wrong setting, not because the care was medically unnecessary.
Executive Summary (cont.)

- Hospitals reported appealing 40% of all RAC denials, with a 70% success rate in the appeals process.
- 45% of participating hospitals reported having a RAC denial reversed through utilization of the discussion period.
- 63% of all hospitals filing a RAC appeal during the 2nd quarter of 2013 reported appealing short stay medically unnecessary denials.
- Three-fourths of all appealed claims are still sitting in the appeals process.
- 63% of all hospitals reported spending more than $10,000 managing the RAC process during the first quarter of 2013, 45% spent more than $25,000 and 11% spent over $100,000.
There are four RAC regions nationwide. Participation in RAC TRAC is generally consistent with hospital representation in each of the RAC regions.

Source: AHA. (July 2013). RAC TRAC Survey
AHA analysis of survey data collected from 2,425 hospitals: 2,129 reporting activity, 296 reporting no activity through June 2013. 1,273 hospitals participated this quarter. Data were collected from general medical/surgical acute care hospitals (including critical access hospitals and cancer hospitals), long-term acute care hospitals, inpatient rehabilitation hospitals and inpatient psychiatric hospitals.
The majority of hospitals reporting RAC activity are general medical and surgical hospitals.

Number of Hospitals Reporting RAC Activity by Hospital Type, through 2nd Quarter 2013

- **General Medical & Surgical**: 1,719 reporting RAC activity, 56 reporting no activity
- **CAH**: 310 reporting RAC activity, 165 reporting no activity
- **Long-Term Acute Care**: 22 reporting RAC activity, 15 reporting no activity
- **Inpatient Rehabilitation**: 18 reporting RAC activity, 23 reporting no activity
- **Psychiatric**: 12 reporting RAC activity, 19 reporting no activity
- **Children's**: 3 reporting RAC activity, 10 reporting no activity
- **Other***: 45 reporting RAC activity, 8 reporting no activity

*Other includes: Cancer, Chronic Disease, Alcohol and Other Chemical Dep., Heart, Obstetrics & Gynecology, Orthopedic, Other Specialty, and Surgical hospitals.

Chart includes hospitals reporting any inappropriate setting denials or the ability to track inappropriate setting denials. Not all hospital decision-support systems and RACTrac compatible vendors have made accommodations to allow hospitals to answer this question yet. As a result, the volume of medical necessity denials for inappropriate setting may be under-represented in this chart. Furthermore, older RAC claims may not be classified as “inappropriate setting” by the hospital.

The discussion period is intended to be a tool that hospitals may use to reverse denials and avoid the formal Medicare appeals process. All RACs are required to allow a discussion period in which a hospital may share additional information and discuss the denial with the RAC. During the discussion period a hospital may gain more information from the RAC to better understand the cause for the denial and the RAC may receive additional information from the hospital that could potentially result in the RAC reversing its denial.
