Exploring the Impact of the RAC Program on Hospitals Nationwide

Results of AHA RAC TRAC Survey, 2nd Quarter 2015

September 10, 2015
• Centers for Medicare & Medicaid Services (CMS) Recovery Audit Contractors (RACs) conduct reviews of Medicare payments to health care providers, including:
  – automated reviews that use computer software to detect improper payments
  – complex reviews that utilize human review of medical records and other medical documentation
• Improper payments include:
  – incorrect payment amounts;
  – incorrectly coded services (including Medicare severity diagnosis-related group (MS-DRG) miscoding);
  – non-covered services (including services that are not reasonable and necessary); and
  – duplicate services
• Automated activity includes the traditional automated activity as described above as well as semi-automated review activity. These claims are denied in an automated manner if supporting documentation is not received on a timely basis.
RAC TRAC Background

- AHA created RAC TRAC—a free, web-based survey—in response to a lack of data provided by CMS on the impact of the RAC program on America's hospitals.
  - Hospitals use AHA’s online survey application, RAC TRAC (accessed at www.aharactrac.com), to submit their data regarding the impact of the RAC program.
  - Many survey questions are designed to collect cumulative RAC experience data, from the inception of a hospital’s RAC activity through the 2nd quarter of 2015.
  - Survey registration information and RAC TRAC support can be accessed at ractracsupport@providercs.com or 1-888-722-8712.
  - Hospitals submit data to RAC Trac through their claim tracking tools
    - 21 external vendors offer an upload function to export a hospital’s RAC data to RAC Trac, or hospitals can choose to utilize the claim-level tracking tool provided by the AHA.
Executive Summary

- 2,565 hospitals have participated in RAC TRAC since data collection began in January of 2010. 819 hospitals participated this quarter.
- 58% of reviewed claims in Q2 2015 were found to not have an overpayment.
- 30% of hospitals indicated they experienced automated denials for an outpatient coding error.
- 79% of hospitals received a complex denial based on inpatient coding in Q2 2015.
- Hospitals report appealing 49% of all RAC denials.
- 41% of hospitals report having a denial reversed in the discussion period.
- 44% of all cumulative appealed claims are still sitting in the appeals process.
- 50% of all hospitals reported spending more than $10,000 managing the RAC process during the 2nd quarter of 2015, 30% spent more than $25,000 and 7% spent over $100,000.
There are four RAC regions nationwide. Participation in RAC is generally consistent with hospital representation in each of the RAC regions.

The discussion period is intended to be a tool that hospitals may use to reverse denials and avoid the formal Medicare appeals process. All RACs are required to allow a discussion period in which a hospital may share additional information and discuss the denial with the RAC. During the discussion period a hospital may gain more information from the RAC to better understand the cause for the denial and the RAC may receive additional information from the hospital that could potentially result in the RAC reversing its denial.

AHA analysis of survey data collected from 2,565 hospitals: 2,300 reporting activity, 265 reporting no activity through June 2015. 819 hospitals participated this quarter. Data were collected from general medical/surgical acute care hospitals (including critical access hospitals and cancer hospitals), long-term acute care hospitals, inpatient rehabilitation hospitals and inpatient psychiatric hospitals.
Administrative Burden
Hospitals experience many types of additional administrative impacts due to RACs.

Impact of RAC on Participating Hospitals* by Type of Impact, 2nd Quarter 2015

* Includes participating hospitals with and without RAC activity
