

List of Qualified Clinical Data Registries: Post-Acute Care

Clinicians have several options for how they report quality data, one of which is via a qualified clinical data registry (QCDR), a CMS-approved reporting mechanism that collects medical and/or clinical data for the purpose of patient and disease tracking to foster improvement in care. These QCDRs also complete the collection and submission of quality measure data on behalf of eligible professionals. Clinicians who already report the QPP data to these registries automatically fulfill the MIPS reporting requirements. AHA has compiled this list of QCDRs that support reporting of the MIPS measures and/or specialties most relevant for post-acute providers.
