DELIVERING QUALITY WITH DISTINCTION

2012 Quality Excellence Achievement Awards

OVERVIEW

The Illinois Hospital Association's (IHA) Institute for Innovations in Care and Quality (The Institute) second annual Quality Excellence Achievement Awards recognizes and celebrates the achievements of Illinois hospitals that are committed to transforming Illinois health care through innovative approaches and best practices.

From 67 submissions representing 40 hospitals, awards were presented to a total of eight hospitals in two categories: urban and rural/critical access. The two award recipients and six finalists, who were honored at IHA's annual Leadership Summit, were selected by a panel of 30 nationally-recognized quality improvement leaders based on their achievement and progress in advancing one or more elements of the Institute of Medicine's six aims for improvement:

- Safety
- Effectiveness
- Timeliness
- Efficiency
- Equity
- Patient-centered care

To share these initiatives among members, The Institute has published this compendium that provides a synopsis of all award entries along with contact information for additional details. The compendium receives national exposure by being featured annually on the Hospitals in Pursuit of Excellence (HPOE), an AHA affiliate, website.

Project Title: *Bi-Directional Integration of Care Abstract*

Summary: This project was designed to improve the total health care for patients of a community mental health center and the local Federally Qualified Healthcare Center through the development of an integrated system of care.

The target population was comprised of individuals with severe and persistent mental illness with a medical co-morbidity. Integrating the primary and behavioral health care provided a health care home for these individuals.

Patient scores reporting quality of life improvements rose from 38% to 82% (currently). Compliance rate for medical and behavioral health appointments improved from 74% to 81%. The percentage of patients seen in the primary-care setting rose from 0% to 100%, and the percentage of patients receiving a health risk assessment rose from 60% to 86%.
