Fast Facts on US Hospitals

The American Hospital Association conducts an annual survey of hospitals in the United States. The data below, from the fiscal year 2018 AHA Annual Survey, are a sample of what you will find in *AHA Hospital Statistics*, 2020 edition. The definitive source for aggregate hospital data and trend analysis, *AHA Hospital Statistics* includes current and historical data on utilization, personnel, revenue, expenses, community health indicators, physician models, and much more.

AHA Hospital Statistics is published annually by Health Forum, an affiliate of the American Hospital Association. To order print copies of AHA Hospital Statistics, call (800) AHA-2626 or visit the AHA online store. An interactive online version is also available. Subscribers can access online.

Note that the ICU bed data is not published in AHA Hospital Statistics.

For further information, contact the AHA Resource Center at (312) 422-2050 or rc@aha.org

Total Number of All U.S. Hospitals	6,146
Number of U.S. Community ¹ Hospitals	5,198
Number of Nongovernment Not-for-Profit Community Hospitals	2,937
Number of Investor-Owned (For-Profit) Community Hospitals	1,296
Number of State and Local Government Community Hospitals	965
Number of Federal Government Hospitals	209
Number of Nonfederal Psychiatric Hospitals	616
Other ² Hospitals	123
Total Staffed Beds in All U.S. Hospitals	924,107
Staffed Beds in Community Hospitals	792,417
Intensive Care Beds ³ in Community Hospitals	
Medical-Surgical Intensive Care ⁴ Beds in Community Hospitals	46,825
Cardiac Intensive Care ⁵ Beds in Community Hospitals	14,439
Neonatal Intensive Care Beds in Community Hospitals	22,860
Pediatric Intensive Care ⁷ Beds in Community Hospitals	5,131
Burn Care Beds ⁸ in Community Hospitals	1,198
Other Intensive Care ⁹ Beds in Community Hospitals	7,323
Total Admissions in All U.S. Hospitals	36,353,946
Admissions in Community Hospitals	34,251,159
Total Expenses for All U.S. Hospitals	\$1,112,207,387,000
Expenses for Community Hospitals	\$1,010,271,112,000
Expenses for community respitats	ψ1/010/2/1/112/000
Number of Rural Community Hospitals	1,821
Number of Urban Community Hospitals	3,377
Number of Community Hospitals in a System ¹⁰	3,491

¹Community hospitals are defined as all nonfederal, short-term general, and other special hospitals. Other special hospitals include obstetrics and gynecology; eye, ear, nose, and throat; long term acute-care; rehabilitation; orthopedic; and other individually described specialty services. Community hospitals include academic medical centers or other teaching hospitals if they are nonfederal short-term hospitals. Excluded are hospitals not accessible by the general public, such as prison hospitals or college infirmaries.

²Other hospitals include nonfederal long term care hospitals and hospital units within an institution such as a prison hospital or school infirmary. Long term care hospitals may be defined by different methods; here they include other hospitals with an average length of stay of 30 or more days.

³Note that intensive care bed counts reflect only those hospitals that responded to the Facilities and Services of the AHA Annual Survey. In 2018, approximately 80% of hospitals responded to this section. Therefore, these responses may not be complete. Intensive care bed counts are also reported in the CMS Healthcare Cost Report Information System (HCRIS) and may be more comprehensive. Total intensive care beds are not summed because the care provided is specialized.

⁴Medical-surgical intensive care. Provides patient care of a more intensive nature than the usual medical and surgical care, on the basis of physicians' orders and approved nursing care plans. These units are staffed with specially trained nursing personnel and contain monitoring and specialized support equipment for patients who because of shock, trauma or other life-threatening conditions require intensified comprehensive observation and care. Includes mixed intensive care units.

⁵Cardiac intensive care. Provides patient care of a more specialized nature than the usual medical and surgical care, on the basis of physicians' orders and approved nursing care plans. The unit is staffed with specially trained nursing personnel and contains monitoring and specialized support or treatment equipment for patients who, because of heart seizure, open-heart surgery, or other life-threatening conditions, require intensified, comprehensive observation and care. May include myocardial infarction, pulmonary care, and heart transplant units.

⁶Neonatal intensive care. A unit that must be separate from the newborn nursery providing intensive care to all sick infants including those with the very lowest birth weights (less than 1500 grams). NICU has potential for providing mechanical ventilation, neonatal surgery, and special care for the sickest infants born in the hospital or transferred from another institution. A full-time neonatologist serves as director of the NICU.

⁷Pediatric intensive care. Provides care to pediatric patients that is of a more intensive nature than that usually provided to pediatric patients. The unit is staffed with specially trained personnel and contains monitoring and specialized support equipment for treatment of patients who, because of shock, trauma, or other life-threatening conditions, require intensified, comprehensive observation and care.

⁸Burn care. Provides care to severely burned patients. Severely burned patients are those with any of the following: (1) second-degree burns of more than 25% total body surface area for adults or 20% total body surface area for children: (2) third-degree burns of more than 10% total body surface area; (3) any severe burns of the hands, face, eyes, ears, or feet; or (4) all inhalation injuries, electrical

burns, complicated burn injuries involving fractures and other major traumas, and all other poor risk factors.

⁹Other intensive care. A specially staffed, specialty equipped, separate section of a hospital dedicated to the observation, care, and treatment of patients with life-threatening illnesses, injuries, or complications from which recovery is possible. It provides special expertise and facilities for the support of vital function and utilizes the skill of medical nursing and other staff experienced in the management of these problems.

¹⁰System is defined by AHA as either a multihospital or a diversified single hospital system. A multihospital system is two or more hospitals owned, leased, sponsored, or contract managed by a central organization. Single, freestanding hospitals may be categorized as a system by bringing into membership three or more, and at least 25 percent, of their owned or leased non-hospital preacute or postacute health care organizations.
